Angelus Britannicus :
A N
EPHEMERIS

For the Year of our Redemption

1681. 532. a. 21.

Being the first after *Bissexile* or *Leap*²⁵ Year;
and from the Creation of the World,
5630.

Amplified with
Astrological Observations from the
Sun's Ingress into *ARIES*, and the
other Cardinal Points ; with an Account of the
Eclipses, Conjunctions, and other Configura-
tions of the Heavenly Bodies.

Calculated for the Meridian of *Lon-*
don where the Pole Artick is Elevated
above the Horizon 51. Degr. 32 Min. but may
indifferently serve for *ENGLAND, SCOTLAND,*
and *IRELAND.*

By *John Tanner Student in Physick and Astrology.*
The Twenty fourth Impression.

Agunt non Cogunt.
*Astra in Voluntatem hominis & liberum arbitrium
indirectè & per accidens agunt; dum directè
temperamentum significant & disponunt, sensusq;
in consensum trahunt.*

London Printed by *H. Horne*, for the
Company of Stationers 1681.

Ephemerides. k.

Common Notes for the Year 1681.

The Glorious and resplendent Planet Venus is our Evening
 Star from the beginning of the year, unto the 18 day of June,
 having then past a Conjunction with the Sun, she becomes Ori-
 ental, and is our bright and glorious morning Star, so continuing
 to the end of the year.

January bath xxxi. days.

*My Genius Mount on Contemplations wings!
With seriousness consult the state of things,
Charm not thy reader with the harmony
O'th' errant Stars, within the azure Skye:
For Mars stands still in order to express
His cruel and inhumane wickedness.*

January 1681.

Month days,
*The milder qualities of splendent Jove,
 Display'd to Phœbus by a Ray of Love,
 Soon after he stands still and doth befriend us,
 And whether seasonable he doth send us.
 But towards the end the Infortunes do prevail,
 Covers the welkin with a Cloudy Vail.*

See Mars oppose the Sun, and whets his steel,
And we expect who shall his anger feel :
Cast care on God ; and let hope be apply'd,
A Balme 'tis that God did for's provide.
Dispair black disband, Hells Ingeneer,
Cast out these passions and you need not fear.

February hath xxviii days.

Month days.

Old surly Saturn clouds the queen o'th Skies,
With his black Veil, and darks her sparkling Eyes,
Hence dark and moisture cometh not unlike
unto the Season for to fill the dike.

But not unto excess: Mars to the Sun
Remits the cold before the month is done.

Lunations and other Observations.

March 1681.

Month days.

The Sun and greater fortunes friendly rayes,
Gives fair and pleasant weather several dayes:
Mars storms and blusters, Venus clouds the Skye,
A shower of rain and Hail sends by and by:
But Saturns quartile beams unto the Sun
Causeth dark weather fore the month is done.

April hath xxx days.

See how Heavens virgin groans as one opprest,
 with the long stay of her unwelcome guest,
 Natures disturber, he loves to contend,
 And pick a quarrel with his dearest friend:
 But Heavens avenging hand can make him bend,
 O'th peaceful Innocents the cause defend.

May 1681.

Month days.

Most of the Month the milder influence
Of the erratick Stars befriended us; hence
We may expect mild weather to ensue,
If antient Authors do but tell us true:
But at the end Mars kindles flames amain,
Sends Coruscations, Lightning, Thunder, Rain.

June 1681.

Month Days.

The Lamp of Heaven resplendent Jove doth joyne;
In Heavens Twins, a fair and ditty Sign;
And we do hope that whilst they are together;
We shall enjoy serene and pleasant weather,
Fit for the Country Man to make his Hay,
If Thunder comes, you must a little stay.

Lunations and other observations. Aspects & weather.

July hath xxxi. days.

*After the Planet Mars eight months hath run,
Through Heavens bright Virgin ere his race was done;
Now takes Heavens Ballance, not to do us right,
But rather to weigh out more of his spight,
And further wrath on mortals to bestow,
Such as his last Conjunction did foreshow.*

July 1681.

Month
Days.

See cloudy Saturn's approach to the Sun,
His lustre hides by their Conjunction;
Clouds the bright Heaven and makes the Farmer stay,
His active hand from housing of his Hay:
Some rain some rest content ye honest men,
For soon the weather will be fair agen.

August 1681.

Month Days.

The two Infortunes in a hateful square,
Changing their Signs disturbeth much the Air,
With Lightning, Thunder Storms: for you shall see,
They like to Fire and Water do agree;
The milder Stars do interpose, and hence
We hope for better from their influence.

September 1681.

Month Days.

If you the Aspects of this month do mind,
For the most part, the weather proveth kind;
Befits the housing of the latter Grain,
And gratifies the forward Seeds-man's pain:
Heaven gives the blessing, to Heaven lift up your eye,
Gods mercies all receive most thankfully.

October 1681.

Month Days.

The Month beginneth with the Winds full high
Caus'd by the motions that disturb the Skie:
About the middle the milder Stars agree,
And soon more pleasing weather seems to be;
Till Sol and Saturn's influence do raise
Dark clouds, cold weather lasting many daies.

November hath xxx days.

Sol's trine would Peace proclaim; a sort of men
 would make's believe the Dragon's in his den:
 But Sol's in Scorpio, Retrograde is Jove,
 And mischief's hid under the veil of Love.
 Scotland be cautious, Holland have a care,
 The Scorpion stings before you be aware.

November 1681.

Month Days.

The Month beginneth with a quiet skie,
Sometimes serene and clear, and by and by,
The weather's moist with soft and gentle showers,
The influence of Heavens milder powers:
But at the end Mars blusters against Jove,
High winds (and perhaps Thunder) it doth move.

December hath xxxi days.

Thus ends the year together with my rhymes,
 Oh may the Heavens design us better times!
 Oh may they favour this our British Land!
 Peace, Truth, and Righteousness joyn hand in hand,
 Cement our Civil discords, happy we,
 In this great Isle of all prosperitie.

December 1681.

Month Days.

At the beginning the benign rayes
O'th' Fortunes, moist and warm for several dayes :
About the middle Saturn clouds the Sky,
And threatens Snow, though from Signs hot and dry :
But Phœbus and Phaethon fall in a rage,
High winds and weather warm they do presage.

Lunations and other observations. Aspects & weather

ASTROLOGICAL OBSERVATIONS

for the year 1681.

Gentle Minerva! wilt thou grant some skill?
 My unsmooth'd lines make ev'n, my Rustick quill
 Guide in thy paths of truth: Count me not rude,
 'Tis not presumption makes me to intrude
 Into thy presence: For thy gentlest frown,
 Is much too strong to throw my Genius down.
 I beg not of thee high and lofty strains,
 But thy sage guidance, to assist my pains.
 My mind is ever, never to offend,
 And do all services to foe and friend:
 Although grim Envy sometimes makes me feel
 The hateful sharpness of his paysoned steel:
 My Innocence and Patience's Charm enough,
 (Inspight o'th' fury) makes me Envy-proof.
 I do not care a Rush, If I my friend
 Oblige, unto whose hands I this commend;
 Mean whiles, ye Fools and Criticks stand ye by,
 Vail'd with Oblivion everlastingly.

The Use of the Almanack.

THE two first pages after the Title-page, need no explanation; the next two pages have each 9 Columns, the 1st the month, the 2^d every 5 days of the month, the 3^d the hour and min. of Suns rising, the 4th of Suns setting, 5th length of the day, 6th length of the night, 7th length of the Planetary hour by day, 8th by night, 9th Quantity of twilight. The next 2 pages shews the precise time of the Moons rising and setting, viz. the rising from the full to the change, her setting from the change to the full, which every intelligent Reader will perceive by inspection: note that M stands for morning, A afternoon. The next is the left-hand page of the Almanack, and hath 11 Columns, the first days of the month, 2. the days of the week, 3. Festivals, place of the Dragons head, and latitude

tude of the 5 Planets. 4. the place of h every day at noon, and the Aspects of the Q to him. The 5 the place of u , 6 of J , 7 of O , the 8 of Q , the 9 of Q , 10 the place of the Q in deg and min. every day at noon. The right hand page hath only 3 Columns; the 1. the days of the month, 2. the change, full, and quarters of the *Moon*; the length, increase, and decrease of the days at some certain times: rising and setting of some of the fixed Stars, with some few Chronological passages: the last contains the mutual Aspects of the Planets, with a brief account of the weather.

The 2 pages after the Almanack, shews you the exact time of the *Moons* coming to the South, enter with the day of the month in the first Column, and the month on the head; and in the common angle you have the hour and minute, A denotes afternoon, M morning: with which, and the Table following of Ports, the Tydes are most precisely known.

The Table of the Ports.

H. M.

<i>Queenborough, Southampton, Portsmouth, Isle of Wight</i>	00 00
<i>Rochester, Mald. Aberd. Redland, West end of the Nore</i>	00 45
<i>Gravesend, Downs, Rumney, Silly, Blackness</i>	1 30
<i>Dundee, St. Andrews, Lisbon, Bell-Isle, Holy-Isle</i>	2 15
<i>London, Tinmouth, Hartlepool, Whitebay, Amsterdam</i>	3 00
<i>Barwick, Flamboroughhead, Bridlington-bay</i>	3 45
<i>Severn, Leith, Dunbar, Kingsale, Calice-creek</i>	4 30
<i>Newcastle, Humber, Falmouth, Dartmouth, Lizard</i>	5 15
<i>Plimouth, Weymouth, Hull, Lynn, Lundy, Holms</i>	6 00
<i>Bristol, Foulnes, at the Start</i>	6 45
<i>Milford, Bridgewater, Lands-end, Waterford, Texel</i>	7 30
<i>Portland, Peterport, Harflew, Hague, Dublin</i>	8 15
<i>Pool, Catnes, Orkney, Isle of man, Bass-Island</i>	9 00
<i>Needles, Luffe, North and South Foreland</i>	9 45
<i>Tarmouth, Dover, Harwich, Calice-road, Bullein</i>	10 30
<i>Rye, Winchelsea, Gorée, Thames, Rhodes</i>	11 15

To find the time of High-water at any of these Ports, seek the hour and minute of the *Moons* Southing, to which

Astrological Observations, 1681.

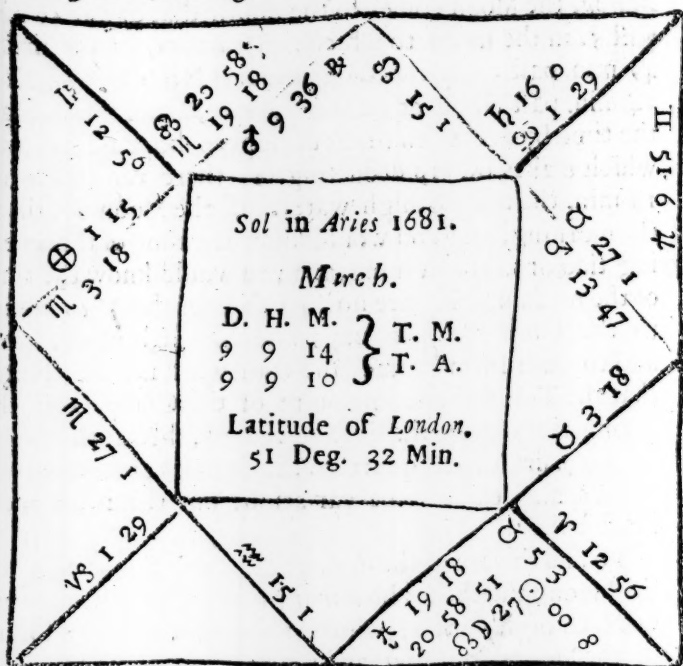

which add the hour and minute against the Port, which giveth the time of High-water. For example, to know the time of high-water at *London-Bridg* the 2d day of *March*, the Moon comes to the South that day at 49 min. past 5. in the morn. to which add 3 hours, and it makes 49 min. past 3. By the same rule it is full Sea at *Bristol* at 34 min. past Noon; at *Yarmouth, Dover, &c.* I must obtain the time by adding to the Southing 10 ho. and 30 min. which makes 16. 19 deducting 12, there remains 4 ho. 19 min. the time of high-water. If the Moon Souths in the morning, and you would know the time of the evening-tide, or in the evening, and you would know the time of the morning-tide See how much later the Moon comes to the south the next day, and take half of that and add to your former time, and your work is done. Note, that the Tide floweth one point of the Compass at the Spring-tides, viz. at the full and change, then at the Neap-tides viz. first or last quarters. Land-floods and Boisterous Winds may cause some variation, but this is the most exact rule.

To find the ho. of the night, repair to a Sun-dial, when the Moon shineth, see how many ho. and min. the shadow wanteth of the line 12, which take from the ho. and min. of the Moons Southing, and the remainder is the hour of the night: But if the shadow be past the line of 12, add the ho. and min. to the ho. and min. of the Moons Southing, and the sum is the hour and minute of the night.

Of the Spring Quarter.

THE Spring always commenceth Astronomically with the Suns entrance into the first scruple of the Æquinoctial sign *Aries*, making the days and nights of equal length, all over the habitable part of the World, which are all those parts on this side the Polar Circles. It produceth a more equal temperament in the Air, opening the pores of the Earth, quickening the almost dead roots of vegetables, and bestowing on the earth a vivifying and

generative faculty. It happeneth this year on *wednesday* the 9th of *March*, at 9 ho. 14 min past Noon, at which time the Heavens present themselves to your view, as in the figure following.

Fixed Signs occupy the Angles of this *Æquinoctial* Schem, yet all the Erratick Stars are immovable, and by corporeal signs, signifying that matters are not come to so fixed and stayed a posture as good men could wish. Let us first examine the fortitudes and debilities of the Planets in this Figure, and of the Lunations preceding and postvening, and what Planet or Planets have most essential dignities in the principal places of those figures, according to the doctrine of *Ptolomy* and others. *Jupiter* and *Mars* claim the principal dominion of the quarter. *Jupiter* is in his detriment in an unfortunate house of heaven.

heaven, but in his own term and face: he is accosted by the malignant Partil Quartile-Aspect of the malevolent Planet *Mars*, Located in the Mid-heaven in the Celestial *Virgin*, out of all essential dignities and Retrograde; and more worthy is our observation of his long transite in the same sign, viz. almost eight months, as if providence had designed his dire influence to be a scourge to the world, as those Countries and Cities under *Virgo* and the Quadrangle thereof, will too severely experience (I fear). *Bonatus* saith, *Si Mars fuerit in virgine significat praelia, & effusiones sanguines in partibus septentrionis.* If *Mars* be in the *Virgin*, he signifieth Wars, and shedding of blood in the Northern parts. *Albumasar* saith, *Et mortalitatem in mulieribus*, a mortality among women. *Si fuerit Latitudo ejus septentrionalis, significat impedimentum in corporibus hominum: & patientur detrimenta semina & messes.* If he hath North-latitude, he signifieth some impediment in the bodies of men, damage to the fruits of the earth, and prejudice to the harvest. *Si fuerit occidentalis significat flatus ventorum.* If he be occidental, he raiseth high winds, &c. *Si fuerit Retrogradus significat guerras venturas inter homines.* If he be Retrograde, he signifieth Wars among men. *Si fuerit in decima, significat tribulationem venturam rusticos atq; popularibus ex parte reges vel divitum ac potentum; & significat vulnera, & percussiones gladiatorum, atq; flagella, & Augustiam ex eis, atq; carcerem, & penuriam. seu indigentiam victualium: & significat bella & contentiones de rebus, quæ non sunt illorum, qui petunt eas, nec pertinent ad eos.* If he be in the 10th, it signifieth tribulation to the common sort of people, from the great men, Potentates and Nobles that are over them; some fall, or at least wounded by the Sword; some endure other extremities of punishment and sorrow; some suffer imprisonment, the want of victuals: It signifieth also Wars and Contentions raised about matters and things by them that have no right title or interest to or in them. *Jupiter* being

weak and impeded by the rays of *Mars*, signifieth the suddain death of some Eminent Clergy-man, or men of the long Robe also; many undergoing the severe checks of their Superiours some feel the heavy hand of Justice for former miscarriages; many displaced and turned out of their Offices, for not obeying, nor conforming to Superior Edicts and Commands: Hence ariseth murmurings, repinings, and some bitter invectives, not only from the vulgar, but from several persons so dignified and distinguished as before. The unfortunate Position of *Mars*, shews the people subject to Mutiny and Rebellion against their Superiors: and probably the *French King* may be subject to such disasters, or his Marshals or great Commanders find work enough to do, to pacifie their discontented and unruly Soldiers and Vassals: the poor Peasants and Subjects in his Dominions, and within his Conquests and Pretensions, being made desperate, and almost brought to despair by their insupportable burthens. God preserve the City of *London* this year, from fires, tumults and insurrections of her inhabitants, Mortality, from strange and very Epidemical distempers. *Haly* saith if *Mars* be in the tenth, *Erunt reges, & Domini, pravi & mali genti, & facient eis malum sine ulla pietate, nec memores erunt mercedis eorum, & interficient, & spoliabunt, & accipient tributa, sine justitia & ratione.*

This Aphorism, as it hath been already, so is likely to be more fully verified in those parts of the world before specified. Of the Quartile of *Mars* to *Jupiter*, *Haly* saith, *Significat quod erunt multi rebelles, interfectiones, delicta, & latrones: & maxime hoc totum erit in puritate.* It signifieth Rebellions, Slaughters, Delinquencies, Robberies, chiefly upon a Religious pretence, probably some mischief plotted by Priests. I have insisted the longer on these evil influences of the Planet *Mars*, we being this year under the dire influence of his last years conjunction in *Cancer*, which evil influence we in *Europe* are likely severely to feel.

feel. Many evils and mischiefs have usually succeeded such Conjunctions, as Mutinies, Insurrections, contempts of Magistracy, fraud and dissimulation among the ordinary sort of people; the high-ways more than ordinarily infested by High-way-men, inhumane Murthers, strange Pyracies and Shipwracks, with suddain and violent Inundations, and overflowing of the Sea-banks, many strange diseases raging, &c. of which I gave you some account in my last years Observations: such like effects as then mentioned, we must expect the latter end of 1680., and this year also 1681, which God in mercy divert, and may we labour by a sincere and unfeigned repentance to turn aside the wrath of the Almighty God and his Judgments, which by the signs of the Heavens do seem to impend.

And now I am speaking of the Signs of Heaven, it will not be amiss to tell you of the *Parelii* or Mock-Suns which were seen on Decemb. 19. 1679, in this our County of *Bucks*, and many places more, by many credible Witnesses, and persons of good worth and quality: The Mock-Suns shined almost as clear, and gave almost as great a light as the true Sun; and appeared each of them to be about 12 yards distant from the true Sun; the time of their appearance I could not precisely gather, but as near as I could by the sundry informations I had, it was about 10 in the forenoon. These *Parelii* or Mock-Suns, are as Images of the true Sun, represented in an equal, smooth, and watery cloud, placed on one or both sides of the Sun, into which the Sun-beams being received, express the likeness of fashion and light that is in the Sun, as in a glass. This Cloud is not under the Sun, for then it would appear in circles, called *Crowns* or *Garments*; if opposite, it would cause the Rainbow, but is on the one or both sides, where the Image may be represented. If too far off, the beams will be too feeble to be reflected; if the Cloud be too near, the beams of the Sun will disperse it; but in

a competent distance, the representation of more Suns may be caused. Some Philosophers are of an Opinion, that the Angels do congregate these Clouds, and form or fashion these Images or Representations, to forewarn the world of some approaching judgments. It seems to be the most eminent of Prodogies, and wonderful to behold; as *Alexander* in his message to *Darius* the Emperor of *Persia*, whom he afterwards subdued, said it was impossible that two Suns should rule the world. They have often portended the contention of Princes for Kingdoms, which they that are any thing acquainted with History may inform themselves, and so I forbear. According to the best information, the Sun at that time was upon or near the Cusp of the 11 house, and in 8 to ♄. ♄ stationary in the 2d, the ♀ in the 8th, in the poysonous Scorpion; ♂ in the 12, lately in 8 to ♄, which may well denote great Treachery among Princes and great persons, and great Contentions in many places of *Europe* upon that occasion. &c. The ☐ of ♂ and ♄ upon the Ingress, may occasion a windy and unpleasant season, and inclined to ficcidity, and ♂ his Influ x threatens an unwholesome air, which *Mars* his △, and *Saturn's* ✕ to ♀ we hope will abate.

Of the Summer Quarter.

THE Summer-quarter begins, or the Sun enters the Tropick of ☊, 1681, on Friday the 10th of June, at 12 ho. 7 min. and 29 2ds, or 7 min. and 29 2ds after midn. which is the apparent time in the Meridian of Lond. and the heavens thus present themselves. The first deg. and 43 min. of the Goat culminates; and 3 deg and 41 min of the Ram ascends the Eastfinitor. We have ♂ and ♄ in a ☐ Aspect from the 3d and 6th houses, and seem (whatever discord they make this quarter) to make a concord with that of the Spring-quarter. News upon news, more than true, various reports, libelling and secret whisperings, many fears and jealousies. The *London-Merchants* seem much

much concerned with some forreign Intelligence, and their fears much heightened, by some suddain gusts and blustering storms of wind, rain, thunder, &c. Some great Gown-man receives honour, and on a sudden falls under disgrace, or his reputation wounded by the clamours of the people; but he bears up, knowing that a greater than he suffers under the ignominious reproaches of his Inferiors. The ☉ and ♄ in *July* puts a stop or fear to the industrious husbandman; and in *August* the ☐ of ♄ and ♂, and the blustering weather that attends it, frightens the laborious Harvest-man for a time, till the peaceful rays of the Sun and *Jupiter* gives better weather.

Of the Harvest Quarter.

THE Autumn or Harvest-quarter begins with the Sun's entrance into the first scruple of ♊, or the ballance, making the 21st Equinox, and the days and nights of equal length: this year it commenceth on *Monday* the 12th of *September*, at 3 ho. and 11 min. past noon, that being the mean or middle time; but the apparent time is the same day at 3 h. 15.m. and 4. 2^{ds} post Meridiem, or afternoon; the Midheav. of this Autumnal figure, is 21 deg. and 31.m. of the Scorpion, and the Ascendant is 15 deg. and 50.m. of the Goat. We have now the benign and resplendent ♃ descending the Western Horoscope upon the very *Cuspis*; & ♂ culminating upon the midheav. in Δ to ♃; ♄ & ♀ intercepted in the Western-Angle, and the ☾ in the Ascendant. Fair & specious pretences used to allay former heats, and satisfy discontented minds, *qui nescit dissimulare nescit regnare*. The weather may probably like to be moderately good, sometimes enclined to dense clouds, close air and some wet. Yet we must consider, that when ♄ hath made a further progress in this sign of *Leo*, the weather may be more inclined to droughtiness, as it was in the years 52, 53, & 54. which were very dry years, and warm Winters; but God disposeth the influences of the heavens according to his good pleasure.

Astrological Observations, 1681.

Of the Winter Quarter.

THE Brumal or Winter-quarter begins this year on *Saturday, Decemb. 10.* at 15 ho. and 46 min. *past Meridiem*, or afternoon. More vulgarly on *Sunday*, at 46 min. *past 3* in the morn. By reason of the Suns furthest departure from us, it maketh our shortest day, and longest night, and so it is likewise to all the parts of the world that are on this side the *Æquator*. At this Ingress 24 deg. and 10 min. of the ♏ is upon the *Medium Cæli*, and 9 deg. 35 min. of the *Scorpion* arising in our Eastern Horizon. ♄ is removed from the Cusp of the 10th, but is in a \square Aspect to the Ascendant, and to the Moon, and the Planet ♂ is making her application to him also by a Δ Aspect, which may occasion clouds and dark weather, not long continuing for the approaching ♂ of the \odot and ♄ with winds, and serenity and remission of cold, will end the year.

Of the Eclipses this year, 1681.

FOUR times this year will the glorious lights of heaven Sun and Moon be Eclipsed, or lose part of their light to the view of our earthly Inhabitants, viz. twice the Sun, and as many times the Moon. One, and but one of which, and that of the Moon will be visible in our Horizon.

The first is an Eclipse of the Moon, on *Febr. 22.* about 11 before noon, but the ☾ is then under the earth, & the Eclipse visible to our *Antipodes*, or the people under us.

The second is Solar, or an Eclipse of the Sun, and it is celebrated on the 10th day of *March*, in the beginning of ♈ , about one of the Clock in the morning, therefore not to be seen by us, but by our *Antipodes*: and therefore I shall say no more of that.

The third will be a Lunar defect on the 19 of *August* in the morning; the calculation thereof from *Astronomia Britannica*, take as followeth.

Astrological Observations, 1681.

If you please to view the Position of the heavens at this Lunar defect, you will find 15 deg. and 47 min. of the Lyon ascend; and 28 deg. and 57 min. of ♊, or the Ram upon the midh. the Eclipsed Luminary in the 8th house of heaven; so that ☿ and ♃, who have had the principal dominion of the year, are Lords also of the Eclipse. They say when Mars is the Lord of an Eclipse, very great evils to mankind, too large here for me to insert; and Jupiters Domi-

Dominion hath a favourable influx upon men. Yet *Prolo-*
my saith, that an Eclipse in one of the bicorporeal signs,
threaten the affairs of Kings, Princes or principal Magi-
strates. *Proclus* saith, that an Eclipse, in ♄ *denario*, primo,
sacerdotibus, & *aditibus*, *Antistibusq;* *lactum*, & *maorem* affert;
in the first 10 deg. of *Pisces*, causeth much sorrow and
mourning to Priests, Prelates, Bishops, and Priors, and
damage to religious houses: possibly some of them may
undergo the frown of Authority for their haughtiness, &
too far meddling with State-affairs. whilest others are ad-
vanced for *Mars* and *Jupiter*, behold the Eclipsed Lumi-
nary with a Trine. *Proclus* also saith, that an Eclipse in
the watry Triplicity signifieth the death of the common
or ignoble people, long-continuing troubles, wars, great
death of Fishes, Water-fowl, and of other creatures li-
ving in the Sea. The Cities and Towns subject to the
effects of this Eclipse are those under ♄, ♀, ♀ and
♄, but I have not room to insert them.

The last Eclipse is of the Sun upon the 2d of *September*,
about three of the Clock in the morning, therefore not
visible unto us: and so much of Eclipses.

*Certain necessary Rules for the Administration of
Physick, Letting of Blood, &c.*

THe Powers of the Body of Man are threefold, Na-
tural, Vital, and Animal; the Natural power is
seated in the Liver, governed by *Jupiter*, assisted by
Luna and *Venus*; from this is bred the four Humours,
Blood, *Choler*, *Phlegm*, *Melancholy*: *Blood* is made of
meat perfectly concocted, in quality hot and moist, and
is under *Jupiter*. *Choler* is made of meat more than per-
fectly concocted, it is the spume or froth of the *Blood*,
hot and dry, under *Mars*. *Phlegm* is made of meat not
perfectly digested, it is cold and moist in quality, under
the *Moon* and *Venus*. *Melancholy* is the sediment of the
Blood, cold and dry in quality, governed by *Saturn*.

The

The Natural Powers comprehend these four Administering Vertues, or Faculties, viz. Attractive, Retentive, Digestive, and Expulsive. The Attractive Faculty is hot and dry, under the influence of the *Sun* and *Mars*, fortified when the *Moon* passeth through *Aries*, *Leo*, *Sagitary*. The Retentive Faculty is cold and dry, under *Saturn*, strengthened, the *Moon* in *Taurus*, *Virgo*, *Capricorn*. The Digestive Faculty is under *Jupiter*, hot and moist, strengthened, the *Moon* in *Gemini*, *Libra*, *Aquary*. The Expulsive is cold and moist under the *Moon*, assisted by the *Moon* in *Cancer*, *Scorpio*, *Pisces*. In strengthening these Faculties, let the *Moon* be in one of these Signs, or let one of them ascend.

The Vital power is seated in the Heart, and is governed by the *Sun*; it is strengthened by his Medicines best, and is best done when the *Sun* is in Aspect of the *Fortunes*, viz. *Jupiter* and *Venus*.

The Animal Faculty hath its residence in the Brain, and is divided into Intellective and Sensitive. The first is under the influence of *Mercury*, the other of the *Moon*, and are both assisted by the benevolent rays of *Jupiter* and *Venus*.

The *Moon* in *Cancer*, } ☿ } purge Melancholy.
Scorpio, or *Pisces*, } ♀ } purge Choler.
 In Sextile or Trine to } ☉ } purge Phlegm.

To prepare the Humours, let the *Moon* be in *Gemini*, *Libra*, *Aquary*.

Take Clusters, the *Moon* in *Aries*, *Libra*, *Scorpio*.

Take Vomits, the *Moon* in *Aries*, *Taurus*, *Capricorn*.

Take Gargarisms, the *Moon* in *Aries*, *Cancer*.

Purge the Head by sneezing, the *Moon* in ☿ ♉ ♊

Stop Rheumes, the *Moon* in *Taurus*, *Virgo*, *Capricornus*.

For Bathing, let the *Moon* be in Signs contrary to the Nature of the Disease: Sweat two or three days after the Change, or about the Full Moon, and let the *Moon* be in *Aries*, *Leo*, or *Sagitaris*.

Astrological Observations, 1681.

The Season for Bleeding is at Spring or Fall.

Let young people bleed from the Change to the First Quarter.

Bleed the middle-aged from the First Quarter to the Full.

Elder age bleed from the Full to the last Quarter.

Old age bleed from the last Quarter to the Change.

Bleed the	{	Sanguine	}	The Moon in	{	♂, or ♀	}
		Cholerick				♂, or ♀	
		Phlegmatick				♂, or ♀	
		Melancholy				♂, or ♀	

It is better if the Moon be in Conjunction, Sextile, or Trine with the Fortunes, or the Planets in like Aspect one with the other. The Moon in ill Aspect with the Infortunes, or the Infortunes so configured, forbid Phlebotomy: Let not the Moon be in Gemini or Leo. Observe these Rules, unless in the Pleurisie, Frenzy, Squinancy, or Apoplexy, where Phlebotomy ought not to be neglected or delayed:

*Here to my yearly task I put an end,
And send my present to my Country friend:
Its errand's honest, not to purchase fame,
Nor yet amongst the Learn'd to have a Name;
Its genius strains not after lofty Lays,
Such as men use that hunteth after praise:
Untrim'd and uncorrected, without pride,
Humility be knows will not deride.
Sweet gardens and smooth walks, some leave, to see
What in rough and untill'd mountains be.
Its dress is honest plain simplicity,
Not to be read by the censorious Eye
Of self-conceited Criticks: their esteem
Seek not to gain; but rather theirs that seem
Honest to be, both grave and sober too,
They are the men with whom thou hast to do.*

F I N I S.
